Carbon-Impregnated Polyester Filter Media

Carbon-loaded PET polyester media for air-filtration and odor-control components. Supplied in rolls, sheets and cut parts.

Product construction view.
Thickness and dimensions are agreed for the selected material.

MATERIAL & SUPPLY

Fiber base	**PET polyester**
Carbon form	**Powdered activated carbon**
Thickness range	**1-30 mm**
Maximum width	**2000 mm**
Supply formats	**Rolls, sheets and cut parts**
Roll length / cut size	**Confirm for the selected thickness and order**

Choose the thickness for your application

Tell us the thickness, width, length or finished-part dimensions and quantity you need. The final specification, supply format and any test requirements are agreed for your order.

Start a sample or quotation discussion

Share your application and any dimensions or quantity you already know. A reference specification, drawing or sample photo is helpful; a complete datasheet is not needed to start.

This is polyester-based carbon media, not activated carbon fiber (ACF) cloth or felt. Range endpoints are not interchangeable specifications. This summary is not a model-specific test report; it does not establish removal efficiency, pressure drop or service life.
